SDE Intern | Backend Intern | Software Developer Intern | C/C++ Systems | MERN Backend

SUMMARY

B.Tech Industrial Internet of Things student at NIT Kurukshetra with interest in software development, backend engineering, data structures and algorithms, and systems programming. Building practical projects using Node.js, Express.js, MongoDB, React, C, and C++. Strong focus on writing clean code, understanding fundamentals, and learning production-style development through project-based work.

EDUCATION

National Institute of Technology, Kurukshetra | B.Tech in Industrial Internet of Things (CSE + ECE Interdisciplinary) | Expected 2028
| CGPA: 8.3/10

Class XII: 90% | Class X: 92%

TECHNICAL SKILLS

Programming Languages: C++, C, JavaScript, Python

Backend Development: Node.js, Express.js, REST APIs, JWT Authentication, bcrypt, Middleware, API Routing, Error Handling

Web and Database: React.js, HTML, CSS, Axios, MongoDB, Mongoose

Tools and Platforms: Git, GitHub, VS Code, Postman, Render, CMake, Jupyter Notebook

Core Concepts: Data Structures and Algorithms, Object-Oriented Programming, Operating Systems Basics, DBMS Basics, Computer Networks Basics

Other Areas: C/C++ Systems Programming, Event-Driven Simulation, Control Systems Basics, PID, LQR

PROJECTS

CampusConnect AI | *React.js, Node.js, Express.js, MongoDB, JWT, bcrypt, Axios, Render*

- Built a campus-focused event management platform with user authentication, protected routes, event dashboards, and role-based foundations.
- Implemented backend APIs for registration, login, logout, authentication checking, secure password hashing, and JWT-based session handling.
- Designed MongoDB models and Express.js route/controller structure; connected frontend API calls using Axios and deployed backend on Render.

Custom Shell in C | *C, Operating Systems, Command Line, Process Handling*

- Built a mini command-line shell in C with a continuous read-parse-execute loop to understand how terminal interpreters work internally.
- Implemented built-in commands including exit, echo, and type, along with PATH lookup for executing external system commands.
- Strengthened low-level programming and operating systems fundamentals related to command execution, process flow, and environment handling.

Inverted Pendulum Simulator Study | *C++, CMake, Jupyter Notebook, Control Systems, Simulation*

- Analyzed a C++ inverted pendulum simulation project involving physics modeling, PID/LQR control, and event-driven execution.
- Studied pendulum state modeling using position, velocity, angle, and angular velocity; documented controller and simulation workflow.
- Used simulation outputs and Jupyter-based analysis to compare controller behavior and understand networked control effects.

RELEVANT COURSEWORK

Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Database Management Systems, Computer Networks, Digital Electronics, Internet of Things, Signals and Systems

ACHIEVEMENTS AND ACTIVITIES

- Cleared NDA examination, demonstrating discipline, aptitude, and competitive exam preparation.
- Built and deployed a MERN-based campus event platform as a practical software development project.
- Completed a C-based custom shell project to strengthen operating systems and low-level programming concepts.
- Maintaining consistent project-based learning through backend development, DSA, systems programming, and simulation analysis.
